Imran Nabizada

Dear Hiring Team,

I am excited to apply for the Front-End Developer position at NYSERDA. As a recent graduate of the Springboard Software Engineering Career Track with a strong foundation in JavaScript, React, and responsive UI design, I am eager to contribute to your mission of powering e-commerce innovation with efficient, user-focused technology.

My capstone project, *Road Side Buddy*, demonstrates my ability to design and build intuitive web applications from the ground up. I developed the front end using React, integrated real-time tracking with Mapbox, implemented Firebase for authentication and chat, and connected users to emergency services via ClickSend SMS. This hands-on experience sharpened my skills in building scalable, accessible, and responsive interfaces that prioritize user experience.

Before transitioning into tech, I worked in healthcare operations, where I developed a keen sense for detail, efficiency, and user needs—skills that now guide my approach to front-end development. I also hold multiple Google certifications in IT support, Python automation, and project management, underscoring my dedication to continuous learning and cross-functional collaboration.

MDF Commerce's commitment to digital transformation in commerce aligns closely with my passion for building tools that make a real-world impact. I would be thrilled to bring my skills, creativity, and drive to your team.

Thank you for considering my application. I'd welcome the opportunity to discuss how I can contribute to MDF Commerce's success and innovation.

Sincerely,

Imran Nabizada
